

Pattern Book

How To Order

1. Measure the space to be covered, whether it's a floor, countertop or wall. For more accurate measurements, deduct spaces occupied by cabinets, permanent appliances, bath fixtures and other obstructions to the flow area.
2. Calculate the square footage of tile needed by multiplying the length of the space by the width. Length x Width = Square Footage (Sq. Ft.). *Example: 10x10 room = 100 sq ft*
Don't forget to subtract those areas that interrupt the flow of the space.

$$A \times B = \text{Sq. Ft.}$$

$$\begin{array}{r} D \times C \\ E \times C \\ + F \times C \\ \hline \end{array}$$

INTERRUPTED
SPACE

$$\text{Sq. Ft.} - \text{Int. Sp.} = \text{Order}$$

3. Select the pattern and sizes desired.
Be sure to note any borders and corner pieces you want to include as part of your pattern, and consider any special trim pieces you may need for countertops, entryways, edging, corners and stairs. If you are unsure of what trim pieces you may need, simply note any areas in question and ask your B&F retail dealer, local tile contractor or local distributor when ordering. Have the measurements for these areas available.
4. Multiply the percentages of each tile size from the pattern desired by the total square footage needed to determine the square footage of each size tile needed for your application.
5. Depending on the pattern desired, you will need approximately 10% extra tile to allow for waste. Also consider extra tile to allow for future use or replacement. Consult your local B&F retail dealer, local tile contractor or local distributor when ordering to allow for overages.
