

Nano Sealed - Does Not Require Sealing (prior to or after grouting)

- Uses a Nano seal system that is “baked” into the glaze.

Includes the following series:

- Ottomano Polished
- Eramosa Polished

Nano Sealed - Does Not Require Sealing on most normal applications

- Uses the Chemical method as described above.

- Suitable for most residential, but commercial may benefit from a sealer application. Sealer recommended if using a high performance or contrasting grout color

This includes the following series:

- Premier Polished, the following need to be pre-sealed when using a contrasting grout color:
 - Premier True White Polished
 - Premier Super White Polished
 - Premier Warm White Polished
- Mayfair Polished

Lines that are NOT pre-sealed: Requires sealing prior to and after grouting

- All Natural Stone items – honed or polished
- Down to Earth Polished
- Earhart Polished

Lines where pre-sealing is recommended in some cases, but not a requirement

- Down to Earth Matte
 - Sealer recommended for all applications if using a high performance or contrasting grout color.
 - Most residential installers and homeowners are not familiar with installing or maintaining unglazed tile. It does not behave or clean like a regular matte glazed tile, and the addition of a sealer will improve its performance. For this reason, it is a recommendation to pre-seal the tile.
